

Assignment 10

Write a program that puts a file of numbers in numerical order from largest to smallest.

Write a program that adds the rows and columns in a 2 dimensional array.

Read Chapter 8 about methods. Keep in mind the following questions as you read:

1. What is a parameter and what is the purpose of parameters?
2. What is a return value? How are the types of return values designated?
3. Why are methods helpful in preparing a program?
4. How do you indicate that a method does not return a value?
5. How do you call a method that returns a value?
6. How do you call a method that does not return a value?
7. What does the designation "static" mean?
8. Give some examples of methods you have used previously. Tell whether they are static or not, whether they do or do not return a value.
