

Assignment 12

Due April 10.

Choose one:

1. Write a program that allows 2 users to play tic tac toe. Between now and the due date, we will be learning about methods. Your program should consist of several methods. Some hints will be given at various times during our class meetings.
2. Write a program that allows a user to play tic tac toe with the computer, rather than a second person.

Suggestions and Comments about the assignment:

1. The due date sounds like a long way off, but you will need to begin right away. There is a lot to do to complete this program, and you will need to do some work on the program every day between now and April 10. It's impossible to emphasize too strongly how important it is to start right away.
2. Before you write even one line of Java code, prepare a design and get it approved. We will spend some time during class discussing what your design needs to include, and you will need to do a lot of thinking before writing anything. Everyone should have a draft design completed by April 1, no fooling.
3. Once you have your design approved, you will start to write code. This will be your first program that has several methods. You will be learning to think at various levels of abstraction, because you will write each method independently and then use the main method to put them all together.
4. Start now.
5. Start today.
6. Don't delay
7. Work on this assignment every day.
8. Don't wait.
9. Don't put off working on this assignment.
