

Assignment 7

Chapter 7, Page 398

2, 3, 6, 8, 14, 19

24, 28, 30 (a memory leak refers to memory locations that are no longer available for use, because the only reference to those locations has been deleted).

Suppose you want to add variant records as a feature to C++ or Java (take your choice). Do you need additional syntax? If so, propose a new construct in your language to support the idea of variant records. Give the semantics of your construct.

Due 2/29.
